Application/Control Number: 10/055,648

Art Unit: 1764

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Baile et al.

Baile et al., U.S. Patent 4,492,415, teach roller bearings wherein the matrix of the bearing component is composed of a solid, tough, elastic gel comprising lubricating oil and a high molecular weight polymer (column 3, lines 20-30). In Example 2, column 7 of Baile et al., the lubricating oil is synthetic hydrocarbon oil which has a viscosity of 33 mm<sup>2</sup>/s at 38° C. Conventional lubricating additives such as nylon or Teflon powder and molybdenum disulfide may also be incorporated in the matrix in known manner (column 8, lines 37-40).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Baile et al.

Baile et al. is relied on as cited above. While Baile et al. do not disclose the amount of conventional lubricating additives to be added to the lubricating matrix, it would have been obvious and well within the ability of the skilled artisan to determine the optimum amounts of said known lubricant additives to achieve their recognized desired effects on lubricants. Cf. *In re*

Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955); In re Luck, 476 F.2d 650, 177 USPQ 523 (CCPA 1973); In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry D. Johnson whose telephone number is (703) 308-2515. The examiner can normally be reached on 6:00-3:30, M-F, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glen Caldarola can be reached on (703) 308-6824. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-5408 for regular communications and (703) 305-3599 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308/9661.
